The AGRODOK-SERIES is a series of low-priced, practical manuals on small-scale and sustainable agriculture in the tropics. AGRODOK booklets are available in English (E), French (F), Portuguese (P) and Spanish (S). Agrodok publications can be ordered from AGROMISA or CTA.

1. Pig keeping in the tropics
2. Soil fertility management
3. Preservation of fruit and vegetables
4. Small-scale chicken production
5. Fruit growing in the tropics
6. Simple construction surveying for rural applications
7. Goat keeping in the tropics
8. Preparation and use of compost
9. The home garden in the tropics
10. Cultivation of soya and other legumes
11. Erosion control in the tropics
12. Preservation of fish and meat
13. Water harvesting and soil moisture retention
14. Dairy cattle husbandry
15. Small-scale freshwater fish farming
16. Agroforestry
17. Cultivation of tomato
18. Protection of stored cereal grains and pulses
19. Propagating and planting trees
20. Back-yard rabbit keeping in the tropics
21. On-farm fish culture
22. Small-scale production of weaning foods
23. Protected cultivation
24. Urban agriculture
25. Granaries
26. Marketing for small-scale producers
27. Establishing and managing water points for village livestock
28. Identification of crop damage
29. Pesticides: compounds, use and hazards
30. Non-chemical crop protection
31. Storage of tropical agricultural products
32. Beekeeping in the tropics
33. Duck keeping in the tropics
34. Hatching eggs by hens or in an incubator
35. Donkeys for transport and tillage
36. Preparation of dairy products
37. Small-scale seed production
38. Starting a cooperative
39. Non-timber forest products
40. Small-scale mushroom cultivation
41. Small-scale mushroom cultivation – 2
42. Bee products
43. Rainwater harvesting for domestic use
44. Ethnoveterinary medicine
45. Mitigating the effects of HIV/AIDS in small-scale farming
46. Zoonoses
47. Small farming
48. The Rural Finance Landscape
49. The AGRODOK-SERIES
50. The AGRODOK-SERIES

Cultivation of soya and other legumes
Foreword

This Agrodok is based on a previous shorter edition, Soya. The text has been extended to include more practical information on growing and processing soya and other legumes into nutritious food products. We have included other legumes so that the information in the book will be useful in more areas.

Soya is a legume with many good qualities, and it can be used to improve farming systems. It can also be processed into products that contribute to the daily diet and to family income. In this new edition we devote extra attention to this crop. There are also many areas however where soya cannot be cultivated, but other legumes do grow well and have many of the same good qualities.

This Agrodok is intended to help farmers and extension workers to make choices that will work well under local conditions.
## Contents

1. Introduction 6

2. The importance of legumes 7
   2.1 Legumes 7
   2.2 Soya 9

3. Cultivation requirements for legumes 10
   3.1 Suitable areas 10
   3.2 Climate 13
   3.3 Varieties and cultivars 16
   3.4 Soil 18

4. Integrating legumes into existing farming systems 21
   4.1 Livestock keeping 23
   4.2 Mixed/rotational cropping systems in Asia 24
   4.3 Mixed/rotational cropping systems in Africa 25
   4.4 Labour requirements 26

5. Cultivating soya 27
   5.1 Storage of beans and seed selection 27
   5.2 Nitrogen fixation 28
   5.3 Plant density and sowing methods 30
   5.4 Sowing period 32
   5.5 No-tillage cropping 33
   5.6 Weed control 33
   5.7 Pests 34
   5.8 Diseases 35
   5.9 Harvesting legumes 35
   5.10 Large-scale production in South America 36

6. Soya: nutritious food 37
   6.1 What is good nutrition? 37
   6.2 Malnutrition 40
1 Introduction

Many farmers face urgent problems of making sure there is enough food for their families for the whole year and earning sufficient income. Population growth and the increasing size of cities and towns mean that the amount of land available to grow food for each family is decreasing. Yields are not always high and the prices of agricultural products are generally declining. The amount of money available to buy food if it cannot be grown, to provide housing, travel and medical costs is also decreasing. The costs of agriculture are rising; artificial fertilizers and other chemicals are becoming more expensive, while farmers are not able to increase the prices of their products. There is a shortage of food both in terms of quantity, but also quality: the amount of nutrients in food that children need to grow and adults to stay strong and healthy is often too low.

By growing legumes farmers can do something about these problems.

Legumes take up nitrogen from the air and pass it on to the soil, thereby improving soil fertility. The yields of crops grown on the same land after the legume crop will increase. In addition legumes are nutritious, and may provide income opportunities. Products made from soya and other legumes can be eaten or sold.

This Agrodok is intended for farmers who want to know more about legumes and for extension workers who want to assist the farmers. The answers to the following questions can be found in this book:
- What are legumes?
- How can I cultivate them?
- What products can be made from soya and other legumes?
